Agents need clear spending limits

Agents buy data

When an AI agent pays for APIs, every call spends money.

Loops keep spending

A stuck loop can keep calls going past the intended budget.

No clear view

Developers need limits and visibility into where the money goes.

WHY SPENDING CONTROL MATTERS

57.3%

of survey respondents run agents in production

LangChain · Nov–Dec 2025 survey

109.6M

cumulative x402 transactions

Visa + Artemis · July 2026

THE SOLUTION

One API budget across Solana and Base

Daily budget

Solana and Base requests count toward the same budget.

Per-call limit

A 20-cent call is blocked when the limit is 5 cents.

Allowed recipients

Payments to recipients outside the list are blocked.

SDK checks before signing. Users keep their keys.

A developer-first route to customers

Developer communities

Reach teams building paid agent workflows.

SDK examples on GitHub

Ready-to-run integrations developers can copy.

Assisted integrations

Hands-on setup with paid API workflows.

BUSINESS MODEL

Team subscriptions

Shared controls and spending records for teams running paid agent workflows.

Planned model: subscriptions for teams.
